Job board and application system

Project Overview:

Job Board and Application System is a web application where employers can post job listings and job seekers can apply for jobs. The platform allows job seekers to view available jobs, apply for positions, and track the status of their applications. Employers can post jobs, view applications, and communicate with candidates.

Core Features:

1. **User Authentication:**
   o Users can sign up and log in to the platform.
   o Two types of users: Employers (can post jobs) and Job Seekers (can apply for jobs).
   o Employers and Job Seekers have different dashboards and permissions.
2. **Job Listings:**
   o Employers can post job listings with details such as job title, description, company name, location, salary range, and application deadline.
   o Job seekers can browse through these listings and search/filter jobs based on criteria like location, salary, job type, and category.
3. **Dashboard:**
   o Job Seekers have a dashboard to track jobs they have applied to and monitor the status of their applications.
   o Employers have a dashboard to manage their job postings, view applications, and contact candidates.
4. **Company Profiles:**
   o Employers can create and manage their company profile, including the company logo, description, and list of current job openings.
   o This allows job seekers to learn more about the companies they are applying to.
5. **Resume Upload:**
   o Job seekers can upload their resumes when applying for jobs.
   o This feature ensures that employers can review candidates' qualifications and experience directly from their resumes.
6. **Application Status Updates:**
   o Both job seekers and employers can update the application status.
